

Accuracy declines as CNA burden increases, across read depths

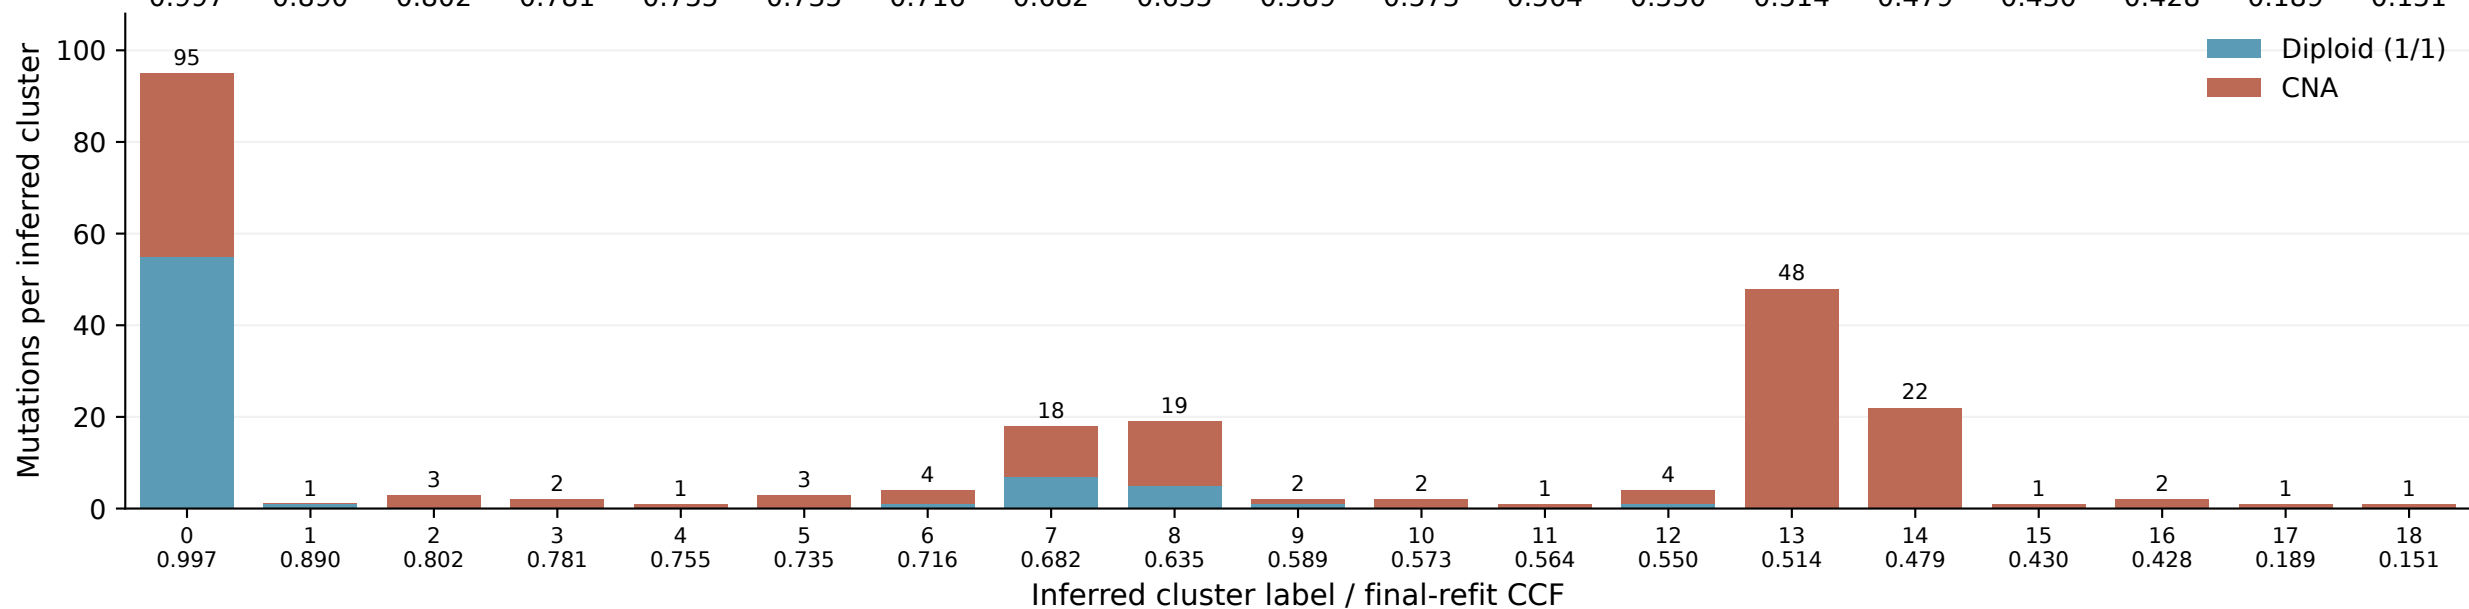

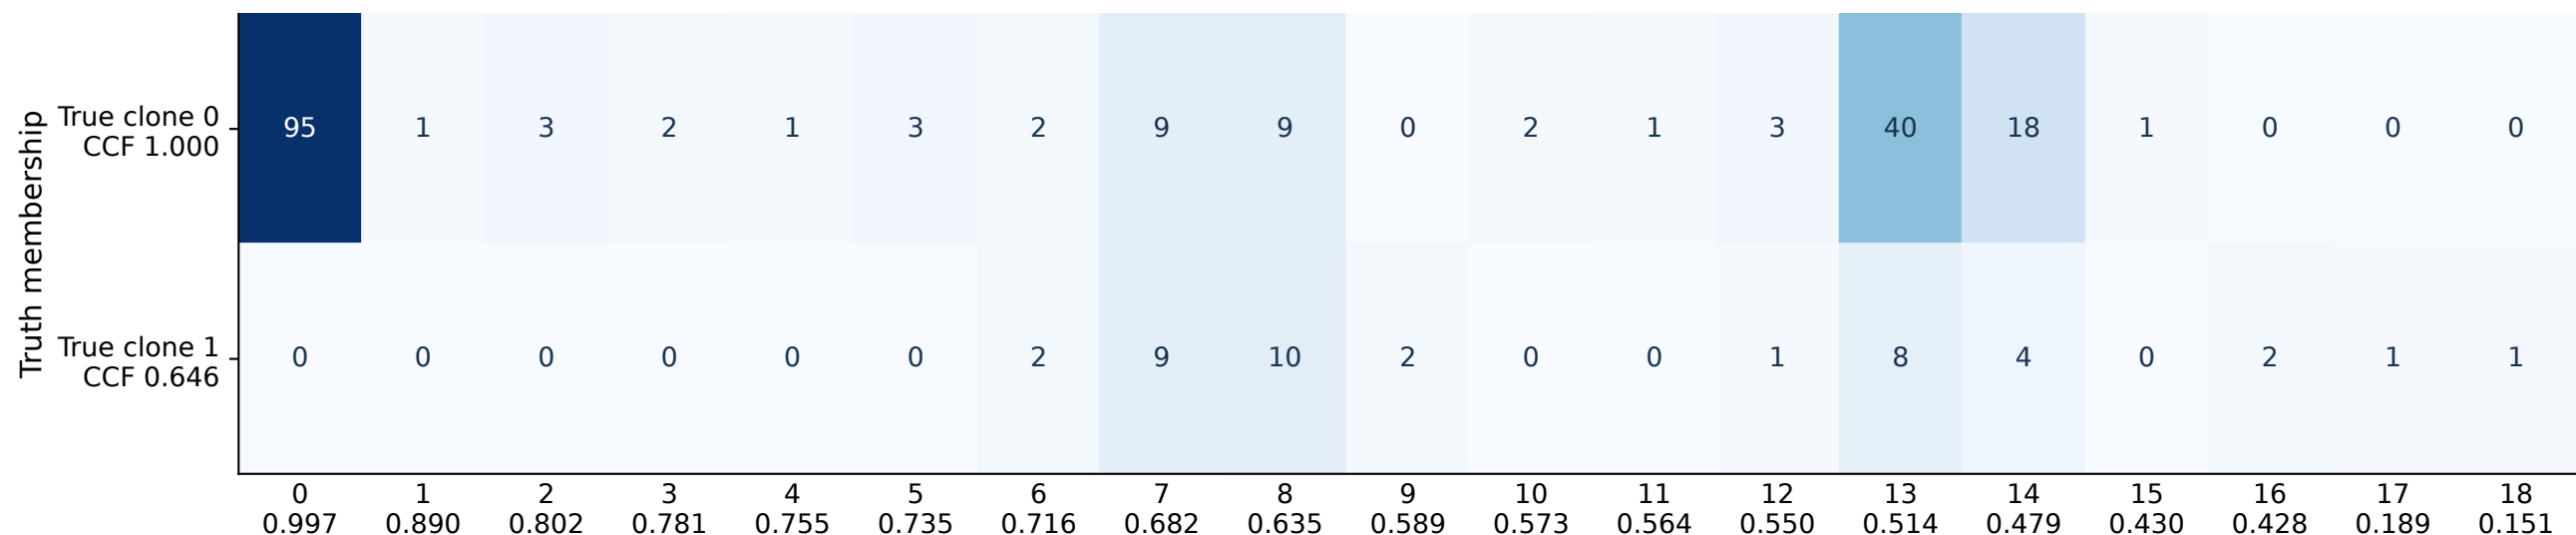

Clonal CNA loci are lost when multiplicity is below major CN

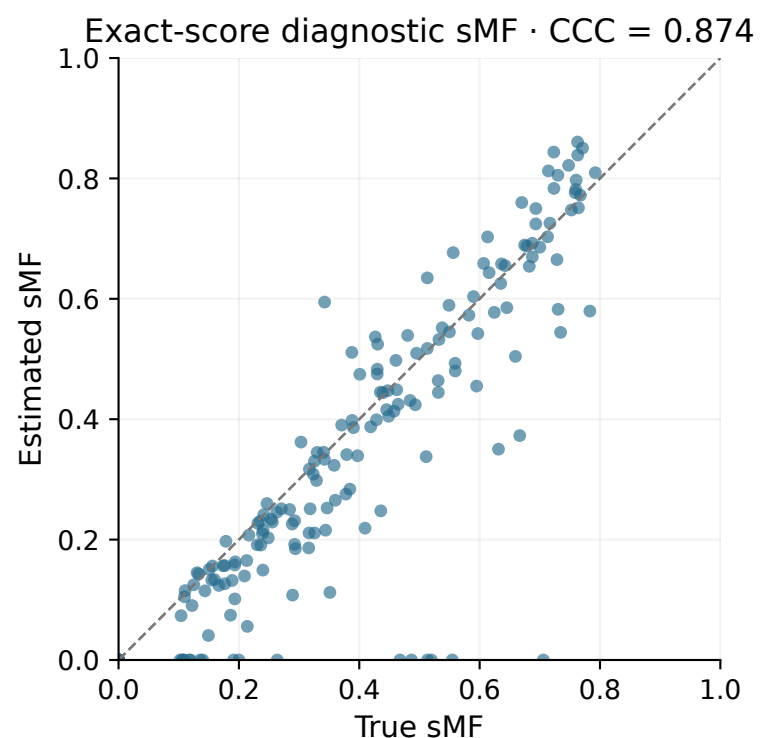

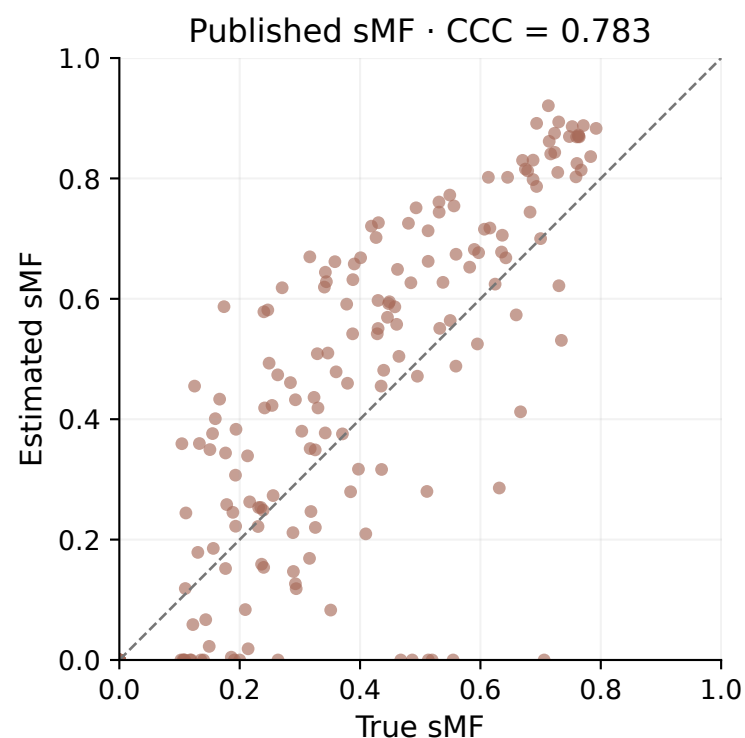

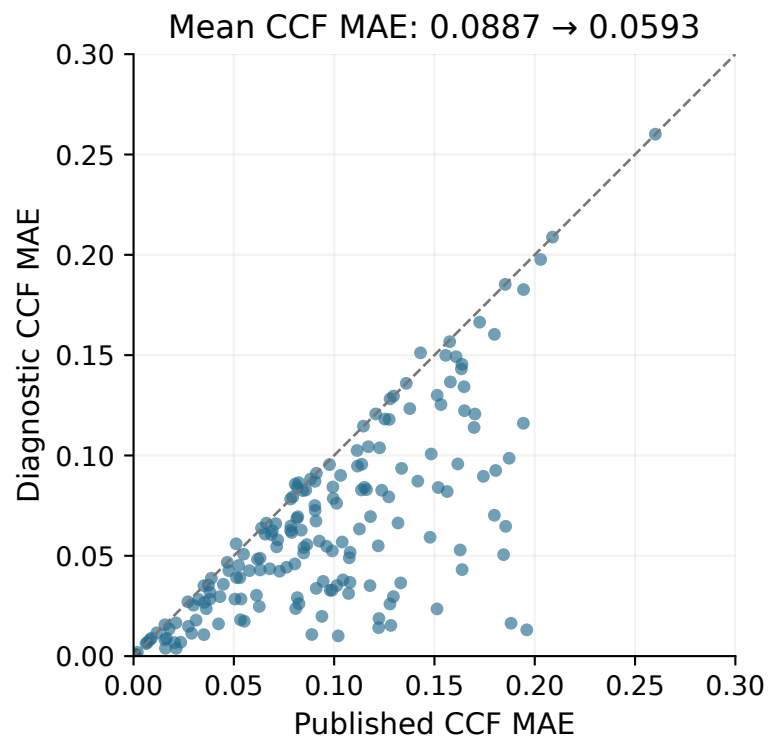

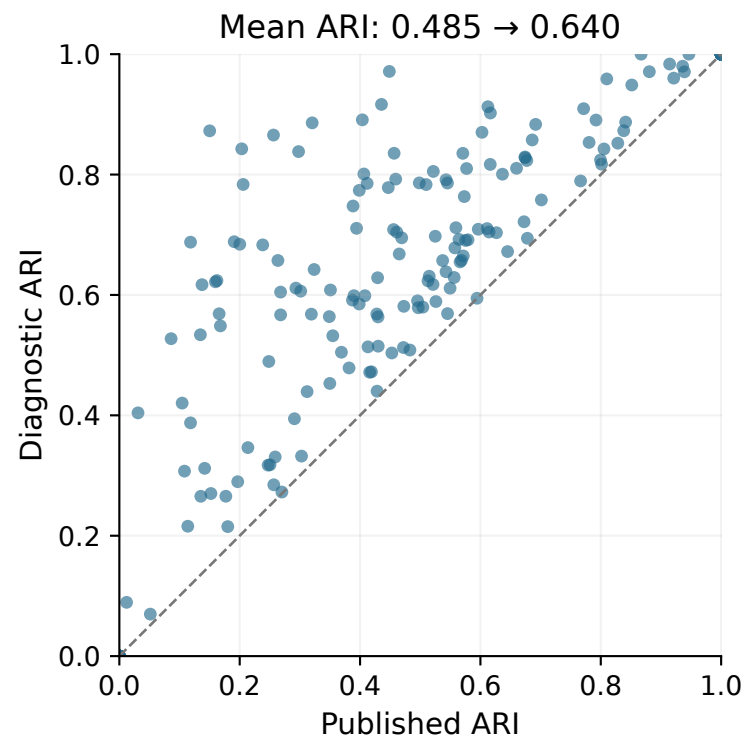

11,292 truly clonal CNA loci · CCF truth = 1
CNA includes balanced amplification; unsupported multiplicities are gray.

500_2_0.9_0.7_rep74: true K = 2, inferred K = 19, ARI = 0.150

Counts of mutations: large low-CCF clusters contain truly clonal mutations

Changing membership improves the existing score and accuracy

193 identical tumors and mutation sets $\cdot$ 152 improve ARI; 0 worsen $\cdot$ mean occupied K: 6.54 $\rightarrow$ 2.47

Unchanged production score $\cdot$ frozen published CCF centers $\cdot$ no truth used in moves $\cdot$ no refits or inherited fit certification
